

Keep your legacy infrastructure beating in time with the latest technology!

Merging legacy and leading edge

The telecoms world has changed substantially over the recent past with the introduction of new technologies and the merging of the telecom and IT worlds. Most organisations rely on a combination of legacy and new technologies to keep their business running so it's vital that they work together.

Even when new technology upgrades are planned, in most cases there is a substantial legacy infrastructure which continues to support the business. Making legacy and new technologies work effectively together requires a certain breadth of experience to keep everything running in harmony.

That's where we can help!

Service management and great tariffs

We can take over the everyday management and billing of all your legacy telecoms services including analogue lines, ISDN2 and ISDN30 services. Not only that, we are able to offer very competitive rental and call tariffs which even some of the largest carriers don't offer.

Analogue lines

Whether it's a line for your broadband or your fax, there is still a need for analogue services. We can provide lines with custom service levels to reflect their importance to your business. We take away the headache of managing the service at the same time reducing your current rental and call tariffs.

ISDN2

ISDN2 circuits can be expensive and to get best value you need to make full use of the lines. We can soften the cost impact with reduced line rentals or strategies to replace these services. As with all Datel lines, great call tariffs are available as part of the service.

ISDN30

Whether you are planning an upgrade or simply need to consolidate existing ISDN30 lines and reduce costs we can help by providing you with lower channel rentals as well as exceptionally low call tariffs.

Why buy from Datel?

Our team has been helping organisations large and not-so-large build and support hybrid telecom infrastructures for over 25 years. Our principle concern is to ensure that you receive value-for-money and top-class customer care whether you use the latest technologies, legacy technologies or a mixture of both.

How do I find out more?
