

SIP trunking enhancement for PSTN connections

Multiple numbers, multiple benefits

You can't be in many places at once, but your business can! Using SIP trunks, you can route multiple numbers from different exchanges into one office.

You can also benefit from lower call costs, (saving more than 80% compared with BT Retail), exceptional call quality and a yearly saving of up to £3000 against ISDN30e rental.

About SIP trunking

There are three key elements to providing ISDN30e quality SIP trunking for businesses: A SIP compatible phone system or gateway, an internet connection designed for voice and termination of SIP calls onto the standard phone network. We are one of the few SIP trunking resellers able to offer a complete end-to-end SIP trunking service.

Features

- A genuine alternative to ISDN30e providing a fully managed service covering IP connectivity, SIP trunks and number management
- Our delivery partner, Spitfire, runs its own core network infrastructure to implement our SIP trunk service. No public internet usage!
- Provision of telephone numbers from geographic areas all over the UK enabling you to have a virtual office anywhere
- Flexible options for providing backup to ISDN lines and forwarding to mobiles and home numbers
- Provision of all components necessary to connect your telephone system via SIP trunks including quality IP access and gateways, and onsite engineering
- A single point of responsibility for all aspects of your SIP trunking solution including the circuit, numbering, back up and engineering
- We have tested our service with a wide range of manufacturers' SIP devices so you can rely on the system being flexible and reliable

Benefits

- Significant cost savings of over 50% compared to some retail tariffs with SIP trunks starting at £4 per month per channel
- Guaranteed call quality across ethernet or voice grade SDSL circuits
- Keep your existing phone number, wherever you move. No long line costs, no diversion costs and no telephone number changes to your marketing collateral
- Massively reduced support headaches as a result of everything being managed by DateTel
- Use as a low-cost alternative for additional capacity or resilience to physically back-up your ISDN services under failure conditions

Why buy from DateTel?

As authorised resellers of Spitfire Networks we can offer a fully integrated solution including hardware, SIP extensions, numbering, call traffic and circuits. This means you benefit from the savings, the convenience and the reliability that comes from using our expert team to advise you.
